ENVIRONMENTAL MANAGEMENT  
DIRECTORY**

---

## **REGIONAL CHAIRMAN'S MESSAGE**

Environmental awareness within the Region continues to be an important concern as we work together globally and locally for a cleaner, healthier environment.

We at the Region advocate environmental responsibility and have developed several programs to encourage local industries, businesses and institutions to seek better alternatives to the traditional methods of waste disposal.

The Region's Environmental Services Department - Waste Management Division - in partnership with community based Hamilton - Wentworth Green Venture, have compiled the "Green Pages" reference to further promote pollution prevention and the 3Rs of waste management - Reduce, Reuse and Recycle.

We believe that with continued cooperation between the Region and our industrial, commercial and institutional community, waste will be more effectively managed, making Hamilton-Wentworth a cleaner place in which to live, work and play.

Sincerely,

Terry Cooke  
Regional Chairman

## **GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY**

---

**JANUARY 1996**

### **INTRODUCTION**

Caring for the environment has prompted both the public and private sectors to explore new and improved ways of managing and recycling waste. Ensuring that institutions and businesses follow good practices in the areas of energy efficiency, water conservation, waste management and recycling, can reduce operating costs, save money and create new jobs.

The Region of Hamilton-Wentworth and Green Venture have formed a partnership, in order to assist the industrial, commercial and institutional (IC&I) community with its waste reduction & recycling needs. Green Venture staff offer confidential waste, energy and water assessments or audits which identify cost reduction opportunities for your company and benefit the environment. For more details call Green Venture at (905) 540-8787.

Staff from the Environmental Services Department can provide your company with information regarding environmental, pollution prevention and compliance issues. For more information contact the Environmental Services Department at (905) 546-4417.

The **Green Pages Directory**, produced by the Region and Green Venture, is an important component in Hamilton-Wentworth's waste diversion goal of a 50% reduction by the year 2000, as set by the Ministry of Environment and Energy. This directory is a valuable resource that will:

- identify environmental services and information sources needed by the IC&I community
- promote existing services and the development of new markets in the Region of Hamilton-Wentworth and vicinity
- reduce material going to landfill, sewer and to the atmosphere, while increasing the amount of recycled waste re-introduced into the marketplace
- encourage behaviour that will alleviate present and future environmental concerns

The Region's Environmental Services Department and Green Venture does not warrant that any companies or businesses listed will serve your needs or deal with your concerns satisfactorily. Those using the directory are advised to make their own inquiries and arrangements with the listed companies or businesses directly.

Every effort has been made to include all companies and businesses involved in waste management, recycling or other environmental services in the Region of Hamilton-Wentworth and vicinity. We welcome any suggestions to make our information more complete.

# GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

## ENVIRONMENTAL SERVICES WASTE MANAGEMENT DIVISION GENERAL INFORMATION

THIS SUMMARY IS PROVIDED FOR GENERAL INFORMATION ONLY. DETAILED INFORMATION CAN BE OBTAINED BY REFERRING TO THE REGIONAL SOLID WASTE BY-LAW #R80-098 OR BY CONTACTING THE SOLID WASTE MANAGEMENT SECTION'S SOLID WASTE HOTLINE AT 546-4417.

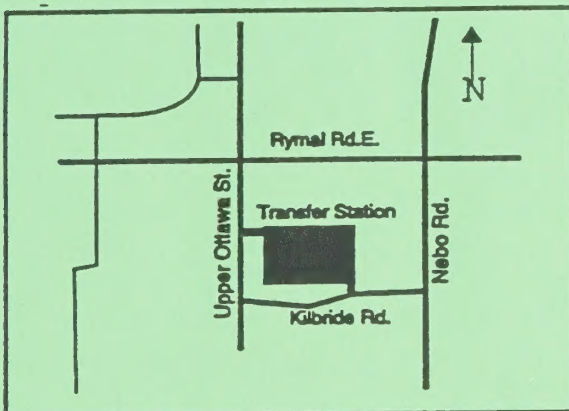

### GARBAGE COLLECTION SERVICE

Household garbage collection in the Region of Hamilton-Wentworth is performed by each Area Municipality or its contractor. For inquiries concerning curbside garbage pick-up contact your Municipality:

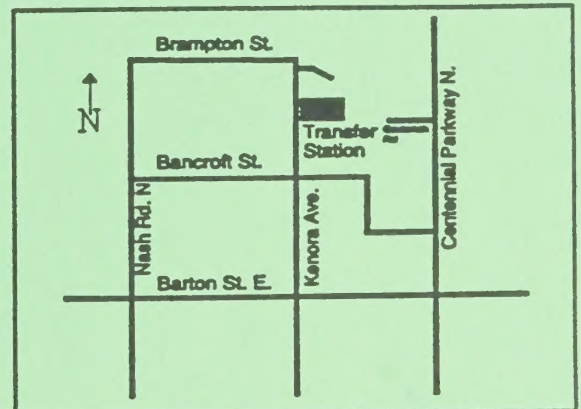

Ancaster	648-4405	Hamilton	546-2785	Dundas	628-6327
Stoney Creek	643-1261	Glanbrook	679-4121	Flamborough	689-7351

### REGIONAL DISPOSAL FACILITIES

The Region no longer operates dumps which are open to the public. Instead, garbage may be taken to the Region's disposal facilities, called "TRANSFER STATIONS". The Transfer Stations are located at:

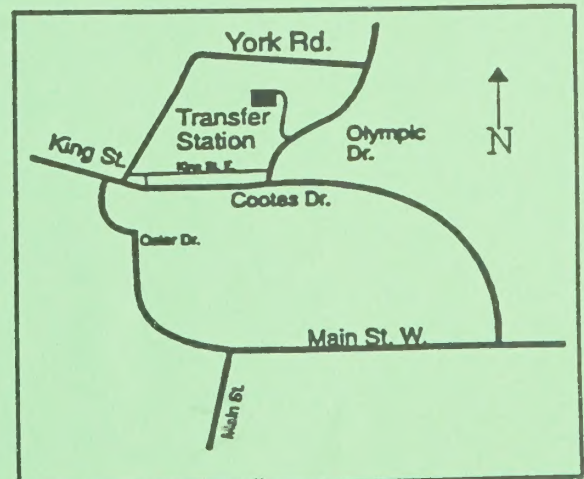

**Mountain Transfer Station**  
**Hamilton Mountain**

**Kenora Transfer Station**  
**East Hamilton**

### \*\* HOURS OF OPERATION \*\*

8:00 a.m. to 6:00 p.m. Mon.- Sat.  
Closed: Sundays, Christmas Day,  
New Years Day and Good Friday.

**Dundas Transfer Station**  
**Dundas**

## GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY

### CONSTRUCTION & DEMOLITION DEBRIS - 10.0

The waste products generated from construction and demolition industries are diverse in nature and quite plentiful. A general definition of C & D debris is:

*"uncontaminated solid waste resulting from the construction, remodelling, repair and demolition of structures and roads, with such waste including bricks, concrete, soils, rock, wood, wall coverings, plaster, drywall, plumbing fixtures, insulation, roofing shingles, asphalt pavement, glass, plastics, etc." (Biocycle July/90 p.57).*

Some of the materials found in C & D debris originate from many sources. The following list is an example of such debris and their sources:

<u>Waste Type</u>	<u>Source</u>
Rubble	Dirt, bricks, cinder blocks, concrete
Asphalt	Roads, bridges, parking lots
Tar-based materials	Shingles, tar paper
Ferrous metal	Pipes, roofing, flashing, steel
Non-ferrous metal	Aluminum, copper, brass, stainless steel
Untreated wood	Framing, scraps
Treated wood	Plywood, pressure-treated, creosote-treated
Glass	Windows, doors
Plastic	Vinyl siding, doors, windows

Many new end-use markets can be created by source separating these materials and re-introducing them into mainstream industries. The chart below is an example of some end-use markets:

<u>Waste Type</u>	<u>End-use</u>
Dirt	Soil, soil conditioner, landscaping, landfill cover
Bricks	Masonry, landscaping, ornamental stone
Concrete, rocks	Fill, roadbeds
Tar-based materials	Mixed with asphalt for resurfacing
Ferrous/non-ferrous metal	Scrap metal buyers
Glass, plaster	Aggregate fill, asphalt
Wood	Fuel, landscaping, compost bulking agent, animal bedding, building products
Cardboard	Fuel pellets

\* (Resource Recycling Dec./90 p.66 & 67)

## COMPANY INFORMATION

## SERVICES

**ORGANIC WASTE (FOOD AND VEGETATION) - 20.0**

Commercial food wastes are generated by retail outlets, hotels, restaurants, airlines, institutions, and food manufacturing and distribution companies. Food wastes can be in the form of trim from produce, flower cuttings, baked goods, deli materials, dairy or frozen products, and prepared meats.

Food that is safe and still suitable for human consumption, but cannot be sold for marketing reasons, can be donated to social agencies such as food banks or hostels. Export to foreign countries as food relief is also an option. Food wastes that are not suitable for human consumption can be diverted from landfill in a number of ways: farmers may use this food for animal feed or agricultural land use.

Composting is an alternative for industrial, commercial and institutional food wastes as well as domestic kitchens, and leaf and yard materials. Restaurant or food processing grease trap wastes may be composted or otherwise treated to be used as a soil amendment.

Food and vegetable oils are recycled into products such as soap and animal feed. Certain parts of fish, meat and fowl are considered delicacies and may find a market elsewhere in the world.

**GLASS, CERAMICS, REFRACTORIES - 30.0**

The recycling of container glass products is quickly becoming an integral part of the glass manufacturing industry. Glass containers are virtually 100 percent recyclable where new glass containers can be made from old ones over and over again. Other glass types such as automotive, laminated glass, etc., currently have limited reuse, but may generate new opportunities for the future.

Manufacturers can acquire glass products to make new ones as containers for food, beverages, perfume, cosmetics, medicine and other consumer goods. The glass recycling process begins with the collection of used bottles and other containers. The glass is crushed into small pieces called cullet. The cullet is then mixed with melted glass, soda ash and limestone to produce new glass. Glass manufacturers can use as much as 25 percent cullet in their process, saving energy, landfill space and most importantly, natural resources.

A major concern for glass recyclers and manufacturers is contamination. Common contaminants include: ceramics, china (eg. tiles, cups, plates, vases), windows, mirrors, drinking glasses, crystal, laboratory glass, cookware and light bulbs. These contaminants have different physical or chemical properties and should not be mixed with container glass.

Glass recycling is finding a place with end-use markets beyond the container industry. Such examples are asphalt aggregates in place of sand in concrete (eg. glasphalt) and fiberglass insulation.

**GREEN PAGES  
ENVIRONMENTAL MANAGEMENT  
DIRECTORY**

---

**METAL - 40.0**

Ferrous and non-ferrous metals are reusable and recyclable materials. Factories and mills that produce metal that is put back into their process is called "home scrap." Goods made of metal that is discarded is called "obsolete scrap." Examples are old cars, railroad tracks, appliances, farm equipment and steel beams.

Steel is the most recycled material in Canada. All steel products are 100% recyclable and can be recycled indefinitely. For instance a car can be recycled into steel for use in a bridge, then the bridge can be recycled to make stoves, and then stoves into food and drink cans.

Steel food and beverage cans are 100% recyclable and implementation of a collection program in the work place easily recovers this valuable resource. Steel cans are made of steel with a protective tin coating. Recyclers are encouraged to densify cans for efficient and economical shipment.

Aluminum is 100% recyclable. Aluminum cans, T.V. dinner trays, pie plates, oven roasters, oven liners and household foil are all recyclable. Aerosol cans, aluminum tubes, wrap, cigarette foil, chip bags, yogurt lids and juice boxes are not recyclable.

Accepts lead-acid batteries, lead sludge, lead drosses and lead plates; 40,000 lbs. minimum quantity - will pick up; no containers.

## **GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY**

---

### **OILS/COOLANTS - 50.0**

Waste oils may have been used as lubricants, heat dissipating, anti-rust agents or in hydraulic systems. As a lubricant oil reduces friction and prevents wear. With heat dissipation oil cools parts and also reduces rust. Used motor oil comes from car service centers, maintenance facilities, military installations, industrial plants, farm equipment, and do-it-yourself oil changers.

Used motor oil may be classified as liquid industrial or hazardous waste. Hazardous oil waste can contain contaminants such as lead, cadmium, chromium, arsenic, and barium. Industrial generators, including service facilities, are required under the Ministry of the Environment regulation 347 to manage their used oil.

Used oil is recycled by re-refining. Re-refining motor oil involves the removal of water, light hydrocarbons and the separation of lubricants from heavy oil and metals.

Glycols may be used in cooling or hydraulic applications. Water glycols are used in hydraulic systems where flammability is a concern.

Ethylene or propylene glycol or anti-freeze is the coolant normally used for car engine cooling. Motor vehicle anti-freeze can be recycled on-site with units which return the filtered anti-freeze to the vehicle's cooling system. Alternately, glycols/anti-freeze can be recycled off-site at larger reclaiming centres.

Oil filters can be compacted and used as a feedstock in steel-making or can be shredded, with the metal recovered for recycling, the paper used as a waste derived fuel and the oil recovered for re-refining.

## COMPANY INFORMATION

## SERVICES

## AER-O-FLO ENVIRONMENTAL INC.

1175 Appleby Line, Unit B2  
Burlington, Ontario  
L7L 5H9

Roy Budd, P. Eng.

(905)335-8944 Fax:(905)335-8972

Manufactures for and supplies to industry, oil separation and recycling equipment; call for details.

**CHEMICALS - 60.0**

The collection and recycling of paint and solvent waste generally involves a two step process. The first part involves delivery or pickup of the waste product from the household or site to a collection agency. The second step involves segregation and consolidation of paint waste to a recycler or approved disposal site.

Paint is separated into three groups: recyclable latex, recyclable alkyd and non-recyclable products (eg. contaminated paint, unknown paints, stains, epoxies, etc.). Recycled paint is tested for contamination. The useable paint is packaged into 45 gallon drums and sent to be reworked. It then is strained, treated and packaged in 20 litre pails for the market.

Recycled paint is most useful for exterior use, municipalities or large institutions for: exterior wood structures, exterior masonry surfaces, and fences. Paint cans are also recycled into reusable steel.

Waste inks can be reclaimed on or off-site by blending to produce black ink.

Chlorofluorocarbons (CFCs) are used as refrigerants and as solvents in metal cleaning operations. As CFCs have been identified as major contributors to the depletion of the stratospheric ozone layer, legislation prevents the release of CFCs to the atmosphere. CFCs can be recycled onsite from refrigeration systems and motor vehicle air conditioners.

## COMPANY INFORMATION

## SERVICES

## AIMCO SOLREC LIMITED

425 Morobel Drive  
Milton, Ontario  
L9T 4N6

George Kopulos, Wahid Mohammed  
(905)878-2627 Fax:(905)878-4728

Solvent recovery from paint, ink and solvent waste; custom recycling; can arrange for pick-up.

**PAPER - 70.0**

Paper products are processed from plant fibres of softwood and hardwood trees, shrubs, grasses and vegetable material. Commercial paper is made by either chemical or mechanical processes. High quality paper is produced by the chemical process and lower grade papers are made by the mechanical process. The major paper types include: fine paper, newsprint, magazine, corrugated containerboard, paperboard, industrial, household and specialty papers.

Newsprint is being recycled from old newspapers and is finding greater use in the newspaper publishing business. Magazines can be reused by schools, libraries, offices and other institutions before going back into the manufacturing process for recycling.

Corrugated cardboard is described as linerboards enveloping a corrugated medium (the fluting of middle layer). If it is in good condition then it may find use as shipping material. Damaged cardboard can be recycled into kraft paper for bags, cardboard containers, packaging materials, biodegradable supplies and paper towels.

Fine paper is used primarily in offices, schools and homes. Source separation and sorting is the key to producing good quality recycled paper. Fine paper can be recycled as 100% post-consumer paper.

**GREEN PAGES  
ENVIRONMENTAL MANAGEMENT  
DIRECTORY**

---

**BIOMEDICAL WASTE - 80.0**

Biomedical (pathological) waste has been redefined by the Ministry of Environment and Energy (MOEE) to clarify and specify those wastes which are considered biomedical and those which are not. This clearer definition will allow generators to minimize the quantities of waste requiring special handling.

Should you require information regarding those wastes considered to be biomedical wastes, please contact the MOEE's Industrial Hazardous Waste section at (416) 314-4186.

## COMPANY INFORMATION

## **GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY**

---

### **PLASTICS - 90.0**

Plastic is a synthetic material composed of carbon and hydrogen molecules. These molecules are tightly bound making plastic difficult to decompose. There are over thirty different types of plastics. The most common are polyethylene terephthalate (PET), used in soft drink bottles; high density polyethylene (HDPE) used for milk and juice jugs, shampoo bottles and motor oil containers; low density polyethylene (LDPE) used for grocery bags; polyvinyl chloride (PVC) used to make vegetable oil bottles; polypropylene (PP) used for margarine and yogurt tubs and polystyrene (PS) for styrofoam.

The Society of Plastics Institute (SPI) of Canada developed a coding system for plastics:

1 - PET	2 - HDPE	3 - PVC	4 - LDPE	5 - PP
6 - PS	7 - Other			

It is estimated that eighty-five percent of all plastic bottles are made from HDPE and PET. HDPE plastics can be reprocessed into pellets for bottle and sheet products. PET is being used in fiberglass, jackets, pillows, twine, rope, carpets and electrical parts.

The efficiency of recycling plastic can be increased if containers are rinsed and bottles with hazardous material labelled, segregated and disposed of in a registered hazardous waste landfill site.

**GREEN PAGES  
ENVIRONMENTAL MANAGEMENT  
DIRECTORY**

---

**WOOD - 100.0**

Wood waste can be acquired from several sources. Forestry sectors produce sawdust, end-cuts, chips, pallets and skids. Construction and demolition debris is a source for framing, lumber, end-cuts, plywood, particleboard, moulding and scraps. Other wastes include tree branches, brush, hydro poles, Christmas trees and railway material.

Waste wood that is found in good condition can be reused in building projects. Wood pallets can be repaired for reuse. Contaminants such as paints, varnishes or laminated surfaces may make the wood unacceptable for recycling. Acceptability depends on the process, its capability to remove contaminants and end-use markets.

Other uses of wood waste include chips or shavings for landscaping, animal feed, particleboard production, roofing materials and charcoal briquettes.

## **GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY**

---

### **TEXTILES - 110.0**

Textiles that can be considered reusable are clothing, upholstery, linens and towels. Most textiles are found to be either reusable or recyclable. Social organizations recover textiles through drop-bins and pickup services.

Used clothing comprises forty percent of collected textiles. These textiles are usually repaired, cleaned and redistributed to needy organizations locally and internationally. Paper, yarn and padding can be made from textile. Paper made from rag bond is used for printing and writing; wool can be rewoven and rag fibre can be used for padding, carpet and auto interiors. Rags have many uses in industry for machinery cleaning and spills.

---

**COMPUTERS - 120.0**

As computer technology has evolved, the number of obsolete computers requiring disposal has increased. The value of computer components has made component recovery and recycling a viable alternative to landfilling.

The typical computer contains both base and precious metals and plastics or combinations of these materials. Computers are dismantled with certain components separated for reuse and the remaining plastics and metals separated for recycling.

**GREEN PAGES  
ENVIRONMENTAL MANAGEMENT  
DIRECTORY**

---

**MISCELLANEOUS MATERIALS - 190.0**

Miscellaneous materials includes wastes that may or may not fit into another category such as fluorescent lamps, for instance, which can be recycled with the metal, glass and mercury vapour components recovered.

Disposable diapers occupy from 2% to 5% of landfill volumes. A recycling alternative now exists and should reduce the quantity of these items presently going to landfill.

## COMPANY INFORMATION

## SERVICES

**REUSE - 300.0**

Many valuable items that may previously have been going to landfill can be reused or refurbished and reused to extend their life. In addition to traditional reuse items such as clothing, appliances and furniture, building materials, computer equipment and paints can now be obtained at reuse centres. This trend should continue as the value of reusable materials is recognized.

**GREEN PAGES  
ENVIRONMENTAL MANAGEMENT  
DIRECTORY**

---

**EQUIPMENT & HARDWARE SUPPLIERS - 400.0**

Pollution prevention or source reduction of waste is an important aspect of any company's waste management strategy. Off-site recycling is the conversion of recyclable material into new products while on-site recycling, a source reduction technique involves the recovery of material on-site for reuse. Examples include solvent and antifreeze recovery. Availability of portable on-site recycling equipment this a cost-effective and convenient alternative to off-site recycling or disposal.

## **GREEN PAGES ENVIRONMENTAL MANAGEMENT DIRECTORY**

---

### **ENVIRONMENTAL REGULATIONS - 500.30**

The information in this section is sourced from the Region of Hamilton-Wentworth's Comprehensive Municipal Pollution Prevention (CMPP) Project, a joint project of the Regional Municipality of Hamilton-Wentworth, Environment Canada and the Ontario Ministry of Environment and Energy. These regulations/guidelines were in effect as of March 1995 when this information was compiled by CMPP staff.

#### **FEDERAL STATUTES**

##### **Canadian Environmental Protection Act (CEPA)**

Under the CEPA, the federal environmental departments have the authority to initiate studies within the provinces and issue regulations affecting national environmental interests. (e.g. industrial groups such as pulp and paper industry, global warming/CO<sub>2</sub>, acid rain and NOx VOCs). Under CEPA the federal government may set operating requirements for facilities, emission limits for pollutants and enter into bilateral partnerships with the provinces of Canada and states of the USA.

CEPA is chemical-specific and focuses on three areas: the import, export, utilization and manufacture of chemicals; the establishment of lists of priority, domestic and toxic substances; and, the prohibition of the import, use or development of certain chemicals.

##### **Fisheries Act**

This Act applies to virtually all streams, lakes and rivers of Canada. It broadly prohibits deleterious discharges that affect fish habitat. Environment Canada has promulgated industrial effluent regulations under the Fisheries Act.

##### **Transportation of Dangerous Goods Act (TDGA)**

This act controls interprovincial and cross-border shipments, requires accurate and complete documentation of shipments, and the manifesting of hazardous or dangerous goods.

##### **Hazardous Products Act**

This act defines restricted or prohibited substances. It also requires registration of products, materials or substances which are likely to be a danger to public health or safety.

### FEDERAL STATUTES (CONT'D...)

#### **National Pollutant Release Inventory (NPRI)**

This legislation requires the reporting of releases of specified chemicals to the environment by facilities according to prescribed criteria. It is designed to collect comprehensive national data regarding releases to air, water or land, as well as transfers in waste for the listed substances. The first report covering 1993 releases applies to 178 substances.

#### **Pest Control Products Act**

This act defines and restricts the manufacture, use, registration, packaging, sale, transfer, and import/export of pest control products nationally and internationally. Implementation of this act is provincial.

### PROVINCIAL STATUTES

#### **Ontario Water Resources Act (OWRA)**

This act restricts and prohibits discharges of contaminants into provincial water bodies including swamps, lakes, rivers, ponds and/or drainage ditches, except as permitted by a legal instrument.

The Ministry of Environment and Energy is responsible for the administration of this act.

#### **Environmental Protection Act**

This act prohibits the discharge of any contaminant which may impair the quality of the natural environment and creates obligations relating to certificates of approval and other legal instruments (e.g. permits, control orders). A number of regulations are made pursuant to the Ontario EPA, including classification of sewage systems, waste management and waste reduction, and air impingement limits.

#### **Regulation 347 - General Waste Management Regulation**

This regulation establishes requirements for the location, maintenance and operation of waste disposal sites, requires waste manifesting, and establishes MOEE waste codes. Twenty-one different types of waste are defined, with conditions being specified for waste storage on a plant site, how certain wastes are classified and categorized, and the maximum period permitted for storage of such waste at any plant site.

#### **Regulation 346 - General Air Regulation**

This regulation details, in a series of tables and schedules, the impingement limits for certain contaminants into the air. Its primary use is as a reference tool for issuing Certificates of Approval for air emissions within the Province.

**PROVINCIAL STATUTES (CONT'D...)**

**Municipal/Industrial Strategy for Abatement (MISA)**

These Clean Water Regulations establish discharge requirements for direct and indirect dischargers. Regulations for nine industrial sectors of direct dischargers have been developed, with seven promulgated (e.g. pulp and paper). Regulations for the municipal component (sewage treatment plants and sewer use) are under development.

**3 R's Regulation**

This regulation requires the implementation of mandatory waste audits and waste reduction workplans in industry, as well as mandatory recycling and source separation. In March 1994, under the EPA, five regulations were promulgated with respect to waste reduction, as follows:

**Regulation 101 - Recycling and Composting of Municipal Waste**

This regulation requires municipalities of population greater than 5,000, to establish, operate and maintain a blue box waste management system and a leaf and yard waste system. Municipalities in Southern Ontario are required to establish such systems by January 1, 1995, whereas Northern Ontario municipalities are required to establish a blue box system by July 1, 1996 and a leaf and yard waste system by July 1, 1995. This regulation sets out the requirements of the required blue box systems, the leaf and yard waste systems, the municipal waste recycling depots, the municipal waste recycling sites, and the leaf and yard waste composting sites.

**Regulation 102 - Waste Audits and Waste Reduction Work Plans**

This regulation requires waste audits to be performed and waste reduction work plans drafted and implemented annually by retail shopping establishments, retail shopping complexes, large construction projects, large demolition projects, office buildings, restaurants, hotels and motels, hospitals, educational institutions, and large manufacturing establishments.

**Regulation 103 - Industrial, Commercial and Institutional Source Separation Programs**

This regulation requires source separation programs to be implemented for the separation of waste for reuse or recycling by retail shopping establishments, retail shopping complexes, large construction projects, large demolition projects, office buildings, restaurants, hotels and motels, hospitals, educational institutions, and large manufacturing establishments in municipalities greater than 5,000.

**PROVINCIAL STATUTES (CONT'D...)**

**3 R's Regulation (cont'd...)**

**Regulation 104 - Packaging Audits and Packaging Reduction Work Plans**

This regulation requires packaging audits be performed and packaging reduction work plans drafted and implemented every two years by large food or beverage manufacturing establishments, paper manufacturing establishments, chemical manufacturing establishments, and importers.

**Regulation 105**

This section revokes, redefines, and amends sections of previous regulations regarding waste management.

**Regulation 358 - Sewage Systems**

This regulation outlines the classification of sewage systems (Class 1 - Class 7) and the exemptions which exist for each class. In addition, the requirements, standards, licensing and fees for operation, construction and maintenance are outlined.

**Regulation 359 - Sewage Systems Exemptions**

Regulation 359 gives exemptions to sewage works designed to distribute sewage on the surface of the ground for the purpose of disposing of the sewage and sewage works that would require an approval under section 53 of the *Ontario Water Resources Act* but for Part VIII of the *Environmental Protection Act*.

**CFC Regulation**

This regulation outlines the use, handling and disposal procedures which must be followed for CFCs and CFC containing refrigeration equipment. Under the CFC regulation, certification is required for any person servicing or testing refrigeration equipment that has the potential for discharging ozone depleting substance into the natural environment. The CFC regulation also restricts the conditions of sale for ozone depleting refrigerants and equipment containing such refrigerants.

**The Municipal Act**

This Act contains administrative procedures for municipal government and gives the municipality the authority to pass by-laws concerning a wide variety of functions, such as sewage and water treatment, waste collection and management, drinking water, land usage, as well as the ability to collect taxes/fees for services.

**PROVINCIAL STATUTES (CONT'D...)**

**Pesticides Act**

This provincial act regulates the storage, sale, display and transportation of pesticides.

**Environmental Bill of Rights**

This provincial act establishes a mechanism for public participation in environmental matters, increases governments' accountability to the public, increases the public's access to the courts, and provides increased protection for employees who report companies causing pollution.

**Environmental Assessment Act (EAA)**

This act provides for the assessment of any proposed major undertaking whether governmental, municipal or private at the very earliest stage so that it may be altered or even cancelled if it is found to be environmentally unacceptable. The act also provides for full public participation in the decision-making process. It is being implemented in stages, applying first to major provincial undertakings. Specific private projects which involve significant environmental effects may be designated for assessment.

Under the EAA, any proponent of an undertaking submits to the ministry an environmental assessment on the proposal. All interested parties are given an opportunity to examine this document and may request that a public hearing be called by the Environmental Assessment Board.

**Regional Act**

The Regional Act delineates the responsibilities between the Regional Municipality and its area municipalities.

**Consolidated Hearings Act**

When the Environmental Assessment Act was first applied to significant municipal projects, one of the main concerns raised by municipalities was the Planning Act and the Ontario Municipal Board Act. The Consolidated Hearings Act provides a streamlined approval process for municipal, private and provincial projects or proposed activities which may otherwise require hearings by more than one tribunal. Hearings under this act are conducted by one or more members of the Ontario Municipal Board, the Environmental Assessment Board or both as chosen by the chairpersons of the two boards. The streamlining of hearings under the Consolidated Hearings Act is aimed at avoiding the possibility of repetitive, expensive, complex and time-consuming approval procedures.

PROVINCIAL STATUTES (CONT'D...)

**Bill 7**

Bill 7, the Municipal Law Amendment Act, amends the Municipal Act, the Regional Act, and the Region of Hamilton-Wentworth Act, clarifying municipal powers with respect to the "3R's" and other waste management activities. Under proposed amendments, municipalities will have the power to establish and operate waste management facilities, require source separation of waste and recyclables, and market products made from waste materials. Under amendments to the Regional Municipalities Act, the Regional Municipality of Hamilton-Wentworth will be able to assume all powers of waste management, with the exception of collection as of January 1, 1997.

**GREEN PAGES  
ENVIRONMENTAL MANAGEMENT  
DIRECTORY**

---

**ORGANIZATIONS - 500.40**

The following is a list of government agencies and organizations that can be contacted to assist you with your waste management needs:

**ASSOCIATION OF MUNICIPAL RECYCLING COORDINATORS (AMRC)**

25 Douglas Street  
Guelph, Ontario  
N1H 2S7  
(519)823-1990

Fax: (519)823-0084

The AMRC is an incorporated non-profit organization formed in 1987 by municipal waste professionals to facilitate the sharing of municipal waste reduction and recycling information and experience among municipalities.

---

**BUSINESS ADVISORY CENTRE (BAC)  
OF HAMILTON-WENTWORTH**

7 Innovation Drive, Suite 100  
Hamilton, Ontario  
L9J 1K3  
(905)689-2400

Fax: (905)689-2200

The BAC is a "not for profit organization", funded by the Regional Municipality of Hamilton-Wentworth and the Ontario Ministry of Industry, Trade and Technology, which provides advice to small business to help improve management, technical and marketing practices, etc., and free information and counselling on starting a small business and low cost seminars on business start-up, planning and marketing/sales.

---

**HAMILTON PUBLIC LIBRARY**

55 York Boulevard  
Box 2700, Station A  
Hamilton, Ontario  
L8N 4E4  
(905)546-3200

The H P L provides information on the environment to consumers, businesses, manufacturers, and the general public. The Central Library's Business Science, Technology and Government Documents Department is the hub of its environment service, including popular "how to", legal, government, scientific, and technical issues. Books, journals, videos, computerized information and a "Green Venture" business Environmental Information Service are available.

**MINISTRY OF AGRICULTURE AND FOOD**

RR#1, 617 Hwy #53 East  
Ancaster, Ontario  
(905)527-2995

The goal of the Ministry of Agriculture and Food is to encourage the efficient and dynamic development of the total agriculture and food sector for the well-being of all people of Ontario. The Ministry's programs include marketing, quality standards, foodland preservation and improvement, education and research, advisory and technical services to farmers, as well as farm financial assistance.

---

**MINISTRY OF ENVIRONMENT & ENERGY (MOEE)**

West Central Region  
119 King Street West  
P.O. Box 2112  
12th Floor  
Hamilton, Ontario  
L8N 3Z9

Waste Reduction Branch  
40 St. Clair Avenue West  
7th Floor  
Toronto, Ontario  
M4V 1M2

(905)521-7640      Fax: (905)521-1601      (416)325-4440      Fax: (416)325-4437

The Ministry is responsible for achieving and maintaining a quality of the environment, including air, water and land, that will protect human health and the ecosystem and will contribute to the well-being of the people of Ontario. By enacting and enforcing legislation such as the Environmental Protection Act (i.e. Regulation 347) the Ministry is able to maintain and monitor the state of the environment.

---

**OMMRI - CORPORATIONS IN SUPPORT OF RECYCLING**

26 Wellington Street East, Suite 601  
Toronto, Ontario  
M5E 1S2

(416)594-3456      Fax: (416)594-3463

OMMRI assists the private sector in reducing the amount of garbage disposed of in Ontario. OMMRI members are helping to achieve a reduction in Ontario's municipal waste stream through practices which encourage recyclability and recycled content. The corporation is primarily involved with blue box programs and has limited participation in ICI activities.

---

**ONTARIO WASTE EXCHANGE (OWE)  
CANADIAN WASTE MATERIALS EXCHANGE (CWME)**

c/o Ortech International  
2395 Speakman Drive  
Mississauga, Ontario  
L5K 1B3

(905)822-4111

Fax: (905)823-1446

The OWE and CWME assist the IC&I Sectors to find technologies and guidelines to minimize waste, users for waste (waste exchange) and recyclers for waste. The OWE is a joint project of the Ontario Ministry of the Environment and Energy (MOEE), the Environment and Plastics Institute of Canada (EPIC) and ORTECH Corporation. OWE works in cooperation with the Canadian Waste Materials Exchange to help industries find practical ways to manage their wastes and save money.

---

**ONTARIO WASTE MANAGEMENT ASSOCIATION (OWMA)**

4195 Dundas Street West, Suite 320  
Etobicoke, Ontario  
M8X 1Y4

(416)236-0172

Fax: (416)236-0174

The OWMA actively promotes the continued development of a strong private waste management industry which plays an integral role in safeguarding the public interest and achieving Ontario's environmental objectives in the most efficient and effective manner. OWMA member companies carry out this role by providing a full range of professional and environmental services and facilities in waste management and material recovery.

---

**THE COMPOSTING COUNCIL OF CANADA (CCC)**

275 MacLaren Street, Suite 3-Q  
Ottawa, Ontario  
K2P 0L9

(613)238-4014

Fax: (613)230-4143

The CCC serves as a forum for those committed to discovering lasting solutions in waste management to work together to advance composting as a safe and effective method for recovery and reusing organic waste. The council is a multi-stakeholder organization and has four regional committees, including one in Ontario.

---

### **RECYCLING COUNCIL OF ONTARIO (RCO)**

489 College Street, Suite 504

Toronto, Ontario

M6G 1A5

(416)960-1025

Fax: (416)960-8053

1(800)263-2849

The RCO, founded in 1978, is a non-profit organization comprised of multi-stakeholders. The RCO provides a number of services including: advocating the conserver society ethic, increase public adoption of 3Rs, develop new recycling systems, perform technical research leading to practical solutions, provide educational material to schools, provide council to government, industry and specific interest groups and facilitate dialogue between diverse segments of society.

---

### **REGIONAL MUNICIPALITY OF HAMILTON-WENTWORTH**

Environmental Services Department, Waste Management Division, Industrial Waste Section

35 King Street East, 4th Floor

Park Place

Hamilton, Ontario

L8N 4A9

(905)546-4417

Fax: (416)546-4494

The Environmental Services Department, Waste Management Division is responsible for the planning and administration of the Region's waste management program including recycling, composting, incineration, landfill operations, promotion of pollution prevention and the administration of Sewer Use Control By-Laws.

---

## GLOSSARY OF TERMS - 600.0

**Baler** - A machine that compacts waste materials into bundles to reduce volume and retains them in this compacted form to reduce transportation costs.

**Biodegradation** - A natural process involving the assimilation or consumption of a material by living micro-organisms.

**Biodegradable Material**- Waste materials capable of being broken down by bacterial or microbe action.

**Bottom Ash** - The residue which remains at the bottom of an incinerator after waste is burned. It can be used in building materials such as concrete and road beds.

**British Thermal Unit (BTU)** - The unit of heat required to raise the temperature of one pound of water by one degree Fahrenheit. In resource recovery

systems, BTU indicates the amount of heat energy produced from burning a given amount of waste.

**Buy-Back Centres & Programs** - Facilities or programs where individuals return recyclable materials to processors for payment.

### **Classification/Sortation-**

Sorting of materials into uniform categories or classes, such as plastics, glass, aluminum, steel and paper, as part of the recycling process.

**Coding** - In the context of waste, coding refers to a system used to identify recyclable materials. The coding system for plastic packaging, a mobius loop with a number in the centre and letters underneath, indicates the resin from which each container is made. The code is moulded into the bottom of the bottles to help recycling sorters identify the different resins.

**Collection** - The act of picking up waste materials at home, businesses or industrial sites and hauling them to a recycling facility, energy recovery plant, or a landfill.

**Collection Centre** - A facility where secondary material is collected, usually from the public, and then resold to brokers or manufacturers for recycling.

**Commingled Plastics** - A mixture of two or more different types of plastic materials. Technology now exists to recycle commingled plastics into useful products.

**Compactor** - Power-driven mechanical equipment that densifies (compresses and reduces the volume of) waste materials. Compactors, which are often installed on residential and commercial refuse trucks, contain material under pressure and will not allow it to expand until it's unloaded.

**Composting** - A process through which organic waste materials are reduced to humus through biodegradation.

**Certificate of Approval (C of A)** - A legal document which is required for the operation of any waste management facility under the Ontario Environmental Protection Act.

**Contaminant** - Foreign material that makes a primary material impure and reduces or eliminates its recycling value.

**Cover Material** - A backfill, usually dirt or ash and free of organic matter, used to cover compacted waste in a sanitary landfill. If there is insufficient soil cover available, then plastic foam sprays can be applied in some locations.

**Cullet** - Broken glass that can be remelted into new glass products.

**C u r b s i d e Pickup/Collection** - Selected recycling materials are collected at the curb, usually from specially designated bins (i.e. blue boxes), for distribution to

appropriate processing facilities.

**Degradable Plastics** - Plastics specifically developed or formulated to break down after exposure to sunlight or microbes. For example, beverage pack rings are now made from photodegradable plastic. Self-dissolving surgical sutures have also been developed to biodegrade within the body.

**Deposit/Returns** - Established in various parts of Canada to help reduce litter. A deposit is paid when purchasing items such as beverages and then is refunded when the containers are returned.

**Disposal** - The final disposition of wastes, either through incineration or landfilling.

**Drop-off Recycling Centres** - Facilities, often unattended bins, where individuals can deposit recyclable materials such as plastics, metals, glass and newspapers.

**Dump** - An open, unmanaged site where garbage is buried or left to decompose. Many dumps, now closed because of environmental problems,

have been replaced with modern sanitary landfills.

**Energy From Waste (EFW)** - The concept of burning waste in an incinerator and using the released energy to make steam or to generate electricity which could be used in a variety of ways (eg. to heat buildings).

**Energy Recovery** - The recovery of energy from a combustion process in useable forms such as heat or electricity.

**Environment** - The Earth and its atmosphere; sometimes called the biosphere.

**Fly Ash** - Non-combustible particulates generated when burning waste materials. Modern incinerators are equipped to capture fly ash and prevent it from entering the atmosphere. Fly ash is often toxic and causes disposal problems (eg. due to incomplete combustion).

**Groundwater** - Water which exists in underground passageways in rocks and which flows in response to gravity; often the source of water for communities.

**Heavy Metals** - A group of metals including aluminum, zinc, chromium, nickel, copper, tin, silver, antimony, cadmium, arsenic, lead, mercury, iron, and cobalt. These materials, due to their persistence in the environment, tend to contaminate the ecosystems's food web. Heavy metals are often present in the fly ash of incinerators and the leachate from landfill sites.

**Humus** - Nutrient-rich material resulting from the natural decay of organic material in the soil; similar to compost.

**Incinerator** - A plant designed to reduce waste volume through combustion. Modern incinerators recover energy from the combusted waste.

**Incinerator Ash** - The postcombustion residue. Bottom ash is removed through a bottom grate and fly ash is removed in the air pollution control equipment (typically an electrostatic precipitator or a bag-house filter system).

**Landfill** - Land used for disposal of waste (see sanitary landfill).

**Leachate** - The liquid which results when rain or melting snow percolates through a material and carries with it dissolved materials picked up as it moves. Depending on the location, leachate may contain hazardous materials which could contaminate groundwater or surface water. Leachate contains more heavy metals if the rain or snow is acidic.

**Litter** - Waste that has not been properly disposed of, either by placing it in a place or container specifically designed for that purpose, or recycling it.

**Manual Separation-** Separation of waste materials by hand, either in the home or office, or in a waste recovery plant. (Also known as hand sorting).

**Materials Recovery** - A process of waste handling that separates out reusable and recyclable materials such as plastics, metals, glass, and certain grades of paper.

**Methane** - A naturally occurring gas produced when organic material biodegrades without the presence of sufficient oxygen. It is often mixed with other gases. Because methane is foul, flammable and can migrate through soil, it can cause problems at landfill sites or in the surrounding area. It can be collected and used for the generation of heat and electricity.

**Mobius Loop** - The Mobius Loop symbolizes the endless use and reuse of materials. The three arrows refer to solids, liquids and gases; the three kinds of recyclable materials. Named after August Mobius, a German mathematician who died in 1868.

**Municipal Solid Waste ( M S W )** - More commonly referred to as garbage, this waste material is handled by municipal collection and/or disposal services. It includes two main types of solid waste: residential waste and industrial, commercial and institutional waste. Municipal solid waste does not include hazardous and liquid industrial waste. Also

known as garbage, refuse, rubbish and trash. Different municipalities make legal distinctions among these terms, but they are all forms of municipal solid waste.

**Packaging Materials-**

Any of a variety of plastics, papers, cardboard, metals, ceramics, glass, wood and paperboard used to make containers for foods, household and industrial products.

**Plastics** - A very large number of different, synthetic, organic compounds, usually made from products of oil/petroleum industry. Different plastics have a great variety of properties and, thus, have many kinds of applications. Because there are so many kinds of plastics, it is often difficult to include them in community recycling programs.

**Primary Material** - Virgin or new material used for manufacturing basic products.

**Reclamation** - The process of restoring materials found in the waste stream to usefulness or productivity. Reclaimed

materials may be used for purposes other than their original use.

**Recycling** - Physically, chemically or biologically reprocessing solid or liquid waste in order to use the material to make a new product. A recycling program involves much more than just the actual reprocessing. It involves also the continuous separation, collection and/or cleaning of the recyclable materials and the maintenance of stable markets for the recyclable materials and useful final end-products.

**Resource Recovery** - Any process that extracts value from collected waste. eg. recycling or burning as a fuel to generate energy.

**Resource Recovery Facility** - Also called an energy recovery or energy from waste plant. A facility where solid waste is converted into some form of usable energy or fuel.

**Sanitary Landfill** - A method of waste disposal designed to reduce hazards to human safety and the environment. For environmental reasons many sanitary landfills

are equipped with heavy plastic liners, leachate collection systems and gas capture/venting systems. Sanitary landfills can be reclaimed after reaching their waste capacity for recreation and parklands.

**Separation** - Division of waste into groups of similar materials, either manually or mechanically with specialized equipment. Recycled plastic packaging has been coded to make the separation process easier (see coding).

**Single Service Packaging** - Materials manufactured for a single use, such as foam plastic or paper cups used in food service establishments and health care centres.

**Source Reduction** - A way of reducing waste byproducts by using less material or fewer materials in the manufacture of products.

**Source Separation** - The purposeful segregation of used materials from municipal waste into specific material categories at the point of generation, or where the waste is created. The generator may generate or may

separate recyclables from other waste, but further sorting may be required. Some municipalities further sort recyclables into separate compartments in the collecting trucks; others co-mingle the recyclables for sorting at another location.

collecting, sorting processing, recycling, reclaiming and disposing of waste.

**Tipping Fee** - The cost charged to dispose of waste at the disposal area such as a landfill or waste-to-energy facility. Usually stated in dollars-per-tonne.

**Transfer Station** - A facility where waste is moved from smaller collection vehicles into larger, more cost-effective transportation units like railroad cars, barges or truck trailers.

**Virgin Materials** - Any basic (raw) material for industrial processing which has not been previously used.

**Volume Reduction** - The processing of waste materials to decrease the amount of space they occupy, usually by crushing, shredding, incineration or composting.

**Waste Management** - The entire process of
